NOAQ Boxwall Flood Barrier

Company: Cascade Engineering
Booth 11058

The Boxwall is a self-anchoring, free-standing, mobile flood barrier that dams flood water. Because a Boxwall is lightweight and easy to assemble, it can be quickly deployed to protect buildings, other valuable assets, and vital infrastructure against floodwater damage. The NOAQ BOXWALL system weighs less than 1% of a corresponding sandbag dike. It is 100 times faster to build, making it possible for anyone to protect their assets from floodwater with a reusable and durable solution. The full Boxwall system includes corners and gables to navigate around your unique landscape and infrastructure to direct, defend, divert, or detain flood water.

TDI Alignment Square

Company: TufTile Inc

Booth 10038

Raised bars oriented perpendicular to the direction of travel on the associated crosswalk, can be used where crossings are skewed or where curb ramps, other geometric cues, and vehicular traffic patterns may direct pedestrians away from the intended crossing alignment. The raised bars help pedestrians with vision disabilities align themselves to cross. When used at a crossing adjacent to an intersection, the TDI square is placed adjacent to the DWS on the side farthest from the intersection center. When used in a midblock location or at a crossing that is separated from an intersection (or roundabout), the alignment square is placed on the downstream side of the crossing (i.e., the opposite side from approaching motor vehicles, bicycles, or trains).
