

ALPHETTA

Company: Energreen America inc.
Booth 2549

Alphetta combines agility, versatility, and productivity in a compact and highly efficient machine. Its super-panoramic, rotating, suspended cab provides outstanding visibility, comfort, and control, allowing the operator the best view of the work area at all times. Alphetta can operate simultaneously with a side flail mower arm and a front-mounted attachment, thanks to its independent pump system, enabling productive multi-function operation in a wide range of applications.

With 22 feet of side reach and up to 28 feet for aerial work, Alphetta delivers excellent performance even in demanding environments. Its boom geometry and positioning allow work to be carried out close to the machine, making it especially effective in narrow areas and high-traffic locations.

The Speed-Shift transmission and exceptional stability ensure smooth, reliable performance in any working condition.

Batt Screed Gen II

Company: Curb Roller Manufacturing
Booth 2705

The Batt Screed Gen II boosts jobsite productivity with faster RPMs, longer runtimes, and expanded capability. Its new conversion kit enables curb placement alongside flatwork, helping crews achieve consistent finishes with less labor amid tightening schedules and workforce challenges.

<https://www.curbroller.com/batt-screed-gen-ii/>

Citywide Spaces

Company: PSD Citywide
Booth 2823

Citywide Spaces goes beyond traditional asset systems that stop at the building level, giving you a detailed view inside every site, floor, and room. Define and organize spaces with flexible hierarchies, capture key details like square footage, capacity, and bookability, and attach assets directly to their exact locations for more accurate tracking. With maintenance and asset data automatically grouped by space, you can generate clear reports on usage, costs, and operational activity at any level. Exclusive insights—such as bookable and hoteling space use—help you better understand and optimize how your facilities are used.

DIPCAM

Company: Can-Ex Technologies
Booth 955

Press record on your phone. Dip it down the manhole. Send the data to the office. That's it. Simple, as manhole inspections should be.

At Can-Ex Technologies, we build for the field, and we know new technology only gets adopted if it fits into how crews already work, not the other way around.

Designed for both contractors and municipalities, the DIPCAM offers a simple, efficient solution without compromising data quality. It enhances field productivity while delivering NASSCO MACP-compliant data to support informed, proactive maintenance decisions.

- No tripod. • No confined space entry. • No extra steps.

One technician. Under three minutes per manhole inspection. The DIPCAM is the tool that scales your operations, not your overhead.

DM360

Company: Diamond Mowers
Booth 2031

The DM360™ is a multi-function machine packed with 360° operator visibility, unmatched maneuverability, and expandable utility, all built on a proven platform. Backed by unmatched support, the DM360™ stands out at the intersection of innovation and infrastructure.

<https://diamondmowers.com/dm-360/>

FASTER Outsourced Maintenance Module

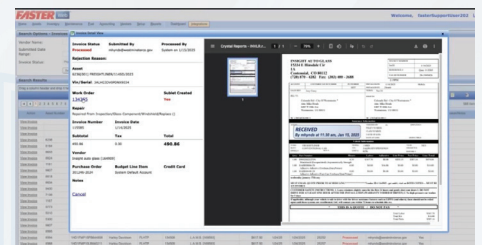

Company: FASTER, by transit technologies
Booth 2715

FASTER's Outsourced Maintenance Module brings third-party repair activity into the core maintenance workflow. Vendors or technicians email invoices—PDFs, Word files, or photos—into FASTER, which identifies the asset and automatically links the invoice to the relevant work order, vendor, and purchase order.

Because it integrates with existing preventive-maintenance and work-order workflows, outsourced repairs are managed alongside in-house work rather than as disconnected paperwork—helping reduce administrative delays that can affect vehicle availability.

This replaces manual invoice rekeying, keeps repair records current, and gives fleet teams real-time visibility into outsourced spend. The result is faster invoice processing, more reliable asset history, stronger vendor accountability, and better lifecycle and budget decisions.

Flex Pro Controls & BrineXtreme Advantage

Company: Henderson Products

Booth 1031

The Henderson Flex Pro Controls system streamlines and automates the brine-making process, helping operators consistently produce brine at the correct concentration with minimal manual input. The system monitors salinity, flow rates, and tank levels in real time while recording production data for easy tracking and reporting.

With an upgraded motor, Flex Pro Controls increases production capacity to up to 7,800 gallons per hour, allowing crews to produce large quantities of brine in less time and stay prepared before a snowstorm arrives. This innovation simplifies the entire brine production process while improving efficiency, consistency, and overall productivity. Can monitor and control the whole operation fully remote from a phone or computer.

Ground Intelligence

Company: Samsara

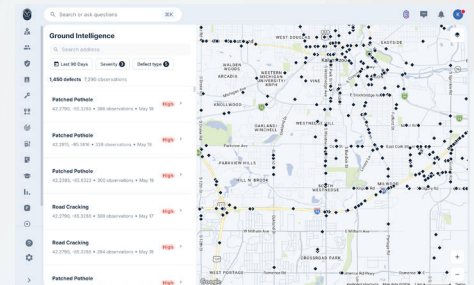

Booth 631

Samsara's Ground Intelligence for Public Sector gives agencies continuous, network-wide visibility into road conditions. Agencies can see their entire jurisdiction in real time, deploy crews proactively, and make maintenance decisions based on live data surveys. Ground Intelligence for Public Sector includes:

—Road Condition Visibility: Automatically detects road hazards and allows you to easily prioritize with filters that include Time Range, Severity Threshold, and more. Supervisors can remotely verify conditions with video evidence before dispatching crews, so they can arrive with the right materials, at the right location, every time.

—StreetSense: Delivers real-time, on-the-ground visibility across an entire jurisdiction through connected Samsara Dash Cams, enabling rapid post-storm assessments and emergency response planning without the need to physically scout road conditions.

Inundata by ISeeChange

Company: ISECHANGE, Inc.

Booth 1737

ISECHANGE's Inundata is an AI-powered flood intelligence platform that helps public works departments reduce flood risk by transforming resident reports, photos, field observations, asset management, weather, GIS, and infrastructure data into real-time operational intelligence. The platform generates storm-specific flood heights, extents, volumes, and predictive flood staging, improving storm response by up to 50%, increasing engineering efficiency by 67%, and enabling better prioritization of maintenance, emergency response, and infrastructure investments.

MK-150 Mastic Kettle

Company: Etnyre International
Booth 1039

Etnyre Mastic Kettle—Innovation for Pavement Preservation.

For over a century, Etnyre has been a trusted leader in road maintenance equipment. With the new Etnyre Mastic Kettle, we are redefining pavement preservation—delivering a solution combining innovation, engineering excellence, and measurable industry impact.

The Etnyre Mastic Kettle addresses a critical infrastructure need: durable repair of potholes and cracks using mastic patching. The 150-gallon unit offers a low-cost entry point without compromising performance. Its Indirect Turbulent Air Flow Heating System, paired with a precision-tuned burner and digital control interface, ensures uniform heat transfer and eliminates operator guesswork. Ergonomic design prioritizes safety and ease of use, making this one of the most operator-friendly systems in the market.

Designed for versatility, the Etnyre Mastic Kettle melts both mastic and patch materials, enabling contractors and municipalities to tackle multiple repair applications with one machine. A vertical mixer with gravity feed and continuous block loading capability streamlines operations, reducing downtime and increasing productivity. "

Oversite Voice - Powered by Gadget

Company: Oversight
Booth 451

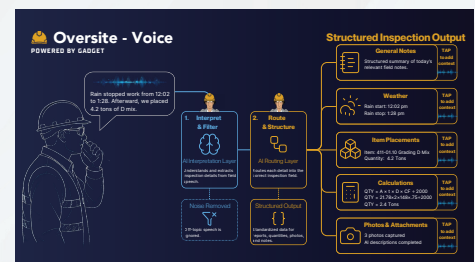

Field documentation is a pain. Typing on a tablet is slow and error-prone, and most people speak four times faster than they type. Oversight Voice closes that gap. Inspectors open their phone, talk to Gadget, our AI agent, and describe the day. To add detail to a specific field, they tap it and speak.

Two layers of AI handle the rest. The first listens and comprehends, filtering out what doesn't belong and turning natural speech into a structured summary of the day. The second routes every detail where it belongs, whether that's a built-in Oversight form or a custom form built for a client's workflow.

The result appears automatically in the right places for the right people. This is more than note-taking: Oversight Voice tracks quantities, keeps owners, engineers, and contractors aligned, and drives the documentation that pays contractors accurately and on time.

Less time typing. More time inspecting the work.

Quick Dam Water Force

Company: Absorbent Specialty Products
Booth 711

Quick Dam Water Force is a portable, self-rising dam used to control water flow. Ideal for water main breaks, flash floods, storm prep, construction water dams, search and rescue, and more.

<https://quickdams.com/pages/water-force-1>

TriFlow Service Skid

Company: Apex Dispensing Systems
Booth 2720

The TriFlow Service Skid is a compact, all-in-one mobile service solution that combines 300 gallons of diesel, 50 gallons of DEF, 50 gallons of hydraulic fluid, grease, compressed air, and onboard tool storage into a single, rugged skid designed to maximize field efficiency. Ideal for contractors, municipalities, fleet operators, and equipment service providers, it allows crews to fuel, lubricate, and service equipment from one platform, reducing downtime, eliminating unnecessary trips back to the yard, and increasing productivity. Its compact footprint fits a variety of truck platforms, providing a cost-effective alternative to larger service trucks while delivering the versatility and reliability needed to keep fleets and equipment working.

ZWAGZ by ZZ2

Company: ZZ2
Booth 2423

THE SIMPLEST SOLUTION FOR FLASHING OEM LIGHTS WITH A PRESS OF A BUTTON ZWAGZ is the smart lighting module from ZZ2 that allows you to activate the vehicle's OEM flash patterns with just a press of a button. Ideal for service vehicles, municipal fleets, rescue, or exhibition, it improves visibility and safety in any environment.

NO DRILLING NEEDED!

Its Plug and Play installation is quick and requires no modifications, compatible with most Ford, GM, RAM, Dodge, Jeep vehicles, and more. It allows selecting multiple light patterns using the original light control (high beam lever) or the included button.
